ARBUTUS ANALYZER ADVANCED TRAINING

LEARNING OBJECTIVES

Become a more efficient Analyzer user by automating your analytics and integrating functions into your analysis. This five-day course delivered in half-day segments is designed to familiarize users with the creation and use of Arbutus Analyzer Procedures (scripts) and Functions in order to automate common tasks and to perform more complex analysis.

Key modules for Functions include:
- Harmonize data for better matching and results
- Use date and time data to identify weekend transactions and build flexible date ranges into your analysis
- Clarify the meaning of your data by inserting, including or excluding characters
- Supercharge your keyword searches using ListFind, WordFind and other functions
- Identify duplicates in inconsistent data (fuzzy comparisons)

Key modules for Procedures include:
- Understand the nature of procedures (also known as scripts) in Analyzer and the various ways to create and edit them
- Create interactive procedures to prompt for information and use variables to store and update the information at run time
- Incorporate best practices, conditionalize when commands should be used, and control the logical flow of your procedures

METHODOLOGY

This is an internet based, instructor-led course. This course is designed to familiarize users with the creation and use of Arbutus Analyzer procedures (scripts) and functions in order to automate common tasks and to perform more complex analytics.
